100	Transamerica Pyramid	San Francisco	1972	48	260	853	Composite	Office

Footnotes:

1. Height is measured from the level of the, lowest, significant, open-air, pedestrian entrance to the architectural top of the building, including spires, but not including antennae, signage or flag poles.
2. A completed building can be considered such if it fulfils all three of the following criteria: a) topped out structurally and architecturally, b) fully-clad, and c) open for business, or at least partially occupied.
3. A tall building is 'topped out' when all its structural members are in place.
4. A tall building is considered to be 'under construction' when site clearing has been completed and foundation / piling work has begun.
5. A tall building is considered to be 'on hold' when it is widely reported within the public domain that construction has halted.

* Construction halted on the Ryugyong Hotel in 1992 and the project remained on-hold until 2008, when construction on the tower resumed.

Material: A *steel* tall building is defined as one where the main vertical and lateral structural elements and floor systems are constructed from steel. A *concrete* tall building is defined as one where the main vertical and lateral structural elements and floor systems are constructed from concrete. A *composite* tall building utilizes a combination of both steel and concrete in the main structural elements throughout the building. A *concrete/steel* tall building indicates a steel structural system located above a concrete structural system, with the opposite true of a *steel/concrete* building.

Use: A *single-function* tall building is defined as one where 85% or more of its total floor area is dedicated to a single usage. A *mixed-use* tall building contains two or more functions, where each of the functions occupy at least 15% of the tower's total floor area. Ancillary / support areas such as car parks and mechanical plant space do not constitute mixed-use functions. Functions are denoted on CTBUH 'Tallest' lists in ascending order.

For a more complete overview of the CTBUH's height criteria see <http://www.ctbuh.org/criteria.htm>
